Wildlife in our Neighborhoods: How Cameras and Collars Help us Track our Furry Friends

Christopher Schell
Department of Biology
Colorado State
University

Cities around the world harbor wildlife. How do all of the species survive in what was previously considered to be ill-equipped habitat for wildlife populations? Are they adapting and evolving... to live with people? We'll additionally look at the coyote, affectionately deemed the ghost of the plains – to understand how large carnivores adapt to anthropogenic landscapes.

Dr. Christopher Schell from the Department of Biology at Colorado State University is going to take you on a familiar, and not so familiar journey, through the cities of Fort Collins and Denver, CO to describe how wildlife biologists attempt to uncover the hidden world of urban wildlife.

Food and drinks are provided. Please RSVP so we can plan accordingly.
